

2 Day Bowel Prep with GoLYTELY, TriLyte, Colyte, or NuLYTELY

THE OHIO STATE UNIVERSITY
WEXNER MEDICAL CENTER

To prepare for your test or procedure, you will need to clean out your bowels or large intestines. **Review all of the information you are given as soon as you can**, so you are prepared and know what to expect during and after your test. **You may need to make changes to your diet or medicines.**

You will need to adjust your diet 5 days before the test and begin this bowel prep at 6:00 PM, 2 days before the test.

You need to have an adult come with you to your test

You will be given medicine to help you relax during the test that will affect your judgement and reflexes much of the day. For your safety, **you will need a responsible adult to drive you home after the test. Your driver needs to check in for the test with you. If your driver doesn't check in with you, we will need to speak to your driver before we can start your test. Your test will be delayed or cancelled if we cannot speak to your driver.**

- If your driver leaves the facility during the test, **he or she needs to give the staff a phone number where he or she can be reached. Your driver needs to be within 30 minutes** of the endoscopy unit.
- If you take a cab, bus, or medical transportation service home after the procedure, **an adult, other than the driver needs to ride with you** for your safety.
- You should have **an adult with you to help you after the test at home for at least 6 hours.**

You may need to make changes to your medicines

If you take aspirin or NSAIDs, such as ibuprofen, naproxen, or Celebrex for pain, you **do NOT need to stop** taking these medicines before this test.

If you take medicines for diabetes, ask the doctor who ordered your diabetes medicine how to adjust your medicines for this test.

If you take any of the blood thinner medicines listed below:

- Ask the doctor who ordered this medicine if it is safe for you to stop taking this medicine before the test. **If you have a stent or certain other health problems, do NOT stop taking these medicines.**
- **If your doctor has advised you to NOT stop taking these medicines before the test, please call 614-293-6255 and ask to talk to a nurse.**
- If your doctor agrees you should stop taking any of the medicines listed below, stop for the listed number of days before your test or as your doctor recommends:
 - Brilinta (Ticagretor) – 5 days
 - Coumadin (Warfarin) – 5 days
 - Effient (Prasugrel) – 7 days
 - Eliquis (Apixaban) – 2 days
 - Lovenox (Enoxaparin) – 1 day
 - Plavix (Clopidogrel) – 5 days
 - Pletal (Cilostazol) – 5 days
 - Pradaxa (Dabigatran) – 2 days
 - Savaysa (Edoxaban) – 2 days
 - Xarelto (Rivaroxaban) – 1 day

The week before your test

The **prescription** for your 2 prep kits will be sent to your preferred pharmacy 1 week before your test. Each prep kit should include:

- A large plastic container that has the medicine powder inside. This will be used to mix the prep.
- Flavor packet that can be added to the container before mixing the prep. (Based on which medicine your doctor ordered, the flavor may already be mixed in with the medicine powder in the container, so there may not be a flavor packet.)

Ask the pharmacist any questions you may have about mixing or taking the prep.

You will need **clear liquids** from the list below to drink during the days before your test.

5 days before your test

- Do not eat any nuts, seeds, popcorn, corn, or green leafy vegetables.
- Stop any iron tablets or vitamins with iron.
- Stop using fiber supplements, like Metamucil, Citrucel, or Fiberall.

About the prep

For this prep, you will drink a medicine mixture to clear the bowels of all solid matter. You will need to go to the bathroom often and your stool will get very watery. The prep may cause you to have cramps or feel bloated.

Your bowels are clear when you are passing pale yellow liquid without any stool.

The prep medicine may not taste good. You need to drink all of it, so your bowels are clear for the test. If your bowels are not cleared, you may have to have the test rescheduled and do another prep.

Clear liquids for prep

These clear liquids are allowed, but **avoid all red colored liquids**:

- Water
- Fruit juices that you can see through, such as apple, white cranberry or white grape
- Popsicles or ice chips
- Ginger ale or lemon-lime soda
- Gatorade, other sports drinks or drink mixes like Kool-Aid
- Clear broth or bouillon
- Jell-O
- Coffee or tea with no milk or cream added

2 days before your test

Do not eat any solid foods or eat or drink any milk products for the next 2 days until after your test is done. Drink only clear liquids.

Morning

- Start in the morning drinking **only clear liquids**.
- Drink at least four (8-ounce) glasses of water through the day as well as other clear liquids.

Afternoon

Most people find it easier to drink the prep medicine if the mixture is cold. Mix it in the afternoon, so it is chilled when you need to start drinking it in the evening.

1. Open the container.
2. Open and pour the flavor packet into the container, if there is a flavor packet.
3. Fill the container with warm water to the "Fill to here" line on the container. Warm water helps dissolve the powder.
4. Put the cap back on the container.

5. Shake the container to mix the prep medicine.
6. Place the container of prep medicine in the refrigerator, so it can chill.

6:00 PM through evening

- Start to drink the prep medicine mixture. **Drink an 8-ounce cup of the mixture every 10 to 15 minutes until you finish half of the mixture.** It is better to drink each cup quickly rather than taking small sips.
- **Store the rest of the mixture in the refrigerator until tomorrow morning.**
- Drink other clear liquids through the evening and tomorrow.

1 day before your test

Do not eat any solid foods or eat or drink any milk products today. Drink only clear liquids.

Morning

- **Drink the other half of the prep mixture you mixed yesterday as you did before.**
- Mix the **second prep kit** as you did yesterday. Place the mixture into the refrigerator to cool until the evening.
- Continue to drink other clear liquids through the day.

6:00 PM through evening

- **Start to drink half of the prep medicine mixture.** Drink an 8-ounce cup of the mixture every 10 to 15 minutes until you finish half of the mixture.
- **You will need to drink half of the mixture this evening and the other half in the morning, 6 hours before your test.**
- Continue to drink other clear liquids through the evening.

Morning of your test

1. **Six (6) hours before your test is scheduled, drink the rest of the prep medicine mixture** as before. You may need to set your alarm to get up to finish your prep medicine.
2. Drink two, 8-ounce cups of clear liquids after you finish the prep medicine.
3. **You can drink clear liquids up to 4 hours before your test.** You can take a small sip of water to take blood pressure, heart, seizure, or pain medicine **within 2 hours of your test.** Your test will be delayed or cancelled if you drink anything other than a sip of water with medicines.
4. Please leave all valuables and jewelry including piercings at home.
5. Female patients should come prepared to give a urine sample in case a pregnancy test is needed.
6. Bring these with you to your test:
 - A list of all medicines, including prescription and over the counter medicines and any vitamin or herbal products you are taking
 - A list of your allergies
 - List of medical conditions and previous surgeries
 - A copy of advanced directive, such as a living will or power of attorney
 - Your photo identification, insurance card and co-payment, if needed

Plan to arrive at the arrival time on your letter, so the staff can get you ready. **Expect to be here 2 to 4 hours for your test and recovery time.**

If you are vomiting up your prep medicine, have not had any bowel movements, or your bowels are not clear, please call 614-293-6255.
