Letrozole and Palbociclib

What is Letrozole (LET-ruh-zahl) and how does it work?
Letrozole is a type of oral, targeted cancer therapy called an “aromatase inhibitor”. Another name for this drug is Femara™. This drug dissolves in your digestive system and is absorbed into your blood stream. In women who have gone through menopause, estrogen is produced by fat tissue in the body. Letrozole blocks the production of estrogen from fat tissue. Letrozole is made in a laboratory. This type of treatment is different from chemotherapy and is also known as “endocrine” or “hormone blocking therapy”.

What is Palbociclib (PALB-o-si-clib) and how does it work?
Palbociclib is a type of oral, targeted cancer therapy called a “cyclin D kinase inhibitor.” Another name for this drug is Ibrance™. This drug dissolves in your digestive system and is absorbed into your blood stream. Palbociclib works by stopping the cancer cell’s growth cycle, causing them to lose their ability to divide and spread. Palbociclib is made in a laboratory.

Why am I getting two drugs for my cancer?
This treatment is used for postmenopausal women with estrogen receptor (ER)-positive, advanced breast cancer. The two drugs work together to stop the growth of cancer cells. This special combination of Letrozole (Femara™) and Palbociclib (Ibrance™) works best when both drugs are given together, as compared to using either drug alone.
What should I tell my doctor before starting this treatment?
Talk to your doctor about the following:

- If you have ever had liver or kidney problems.
- If you are pregnant or think you may be pregnant. Your doctor will talk with you about birth control while getting chemotherapy.
- If you are breastfeeding.
- If you have been told that you need to start a new medicine.
- The medicines/pills you are taking, including:
  - Medicines prescribed by any of your doctors, including
  - Herbs
  - Vitamins
  - Over-the-counter medicines

How does my doctor decide my treatment dose?
To determine your treatment dose, your doctor will review the following: your white blood cell counts, your medicines, how well your liver and kidneys are working, and any other health problems you have.

How do I handle, store and dispose of these drugs?

- **There are special safe handling instructions for this medicine.** Talk to your doctor, pharmacist or nurse about the precautions you need to follow when taking this medicine at home.
- Store these medicines in a closed container at room temperature, away from heat, moisture, and direct light.
- **Do not** store in your bathroom or refrigerator.
- Keep these medicines away from children and do not share it with anyone.
- **Disposal:**
  - Talk with your doctor or pharmacist about how to get rid of prescription medicines safely.
How do I take Letrozole?

- Your dose is 2.5 mg (one tablet) every day, for Days 1 through 28 of the cycle.
- This medicine is taken once a day at approximately the same time every morning.
- Swallow the tablet whole with a full glass of water, with or without food.
- If you miss a dose by more than 6 hours, wait until it is time for your next dose, and skip the missed dose. Do not double up on doses.
- Do not take another dose if you vomit.

How do I take Palbociclib?

- Do not crush, break, chew or open the tablet.
- Your dose of Palbociclib is _______ mg. Take 1 capsule once daily on Days 1 through 21 (= 3 weeks), then do not take any Palbociclib on Days 22 through 28 (= 1 week). One “cycle” is 4 weeks.
- This medicine is taken once a day (on Days 1 through 21) at approximately the same time.
- Swallow the capsule whole with a full glass of water, with food.
- It is alright to take Letrozole and Palbociclib at the same time.
- If you miss a dose by more than 6 hours, wait until it is time for your next dose, and skip the missed dose. Do not double up on doses.
- Do not take another dose if you vomit.
- Your doctor may change your dose in the future to find out what works best for you. Taking a lower dose of Palbociclib does not mean the medicine will not work.

What are the side effects of this treatment?

Every person responds differently to treatment. You may experience any of the following with Palbociclib:

Most common side effects

- Nausea and/or vomiting
- Fatigue or weakness

Letrozole and Palbociclib

You should call your doctor right away if you have any of the following signs or symptoms:
• Fever of 100.4 degrees Fahrenheit (38 degrees Celsius) or higher

**A fever can be life-threatening if not treated. Your doctor may ask you to go to the hospital.**
• Open sores on your tongue or in your mouth
• Nausea that prevents you from eating or drinking
• Diarrhea (4 or more loose stools in 24 hours) or diarrhea at night
• Shortness of breath or trouble breathing, or cough that bothers you or will not go away

Is there anything else I should know about this treatment?
• Palbociclib (Ibrance™) may cause changes in your blood counts. Your doctor will want to check your blood counts at the start of this treatment, every 2 weeks for the first 2 months and then once monthly thereafter.
• Do not eat grapefruit or drink grapefruit juice, Seville oranges or star fruit. This can increase your risk of side effects.
• This treatment may make it harder for your body to fight infections. Wash your hands often and avoid people who are sick.
• You should drink 8 to 10 eight-ounce glasses of non-caffeinated fluid each day throughout your treatment. It is important to keep hydrated while you are receiving treatment.
